

## **Tutorial for project “Tempmail”**

Our project is called “Tempmail” because plain title understandably displays the aim of this project. Usually a lot of people pay attention on the title, so if you don’t want looking for difficult way for creating temporary mail, our site will be interesting for you.

Nowadays an email address is a popular communication method, the practicality and other advantages of which are difficult to overestimate. Today many network resources, websites, programs allow you to activate your account or license solely by sending a control letter to an e-mail address. However, no one will ever guarantee that the email address entered anywhere will not be used by anyone to send unsolicited emails, which are called "spam". But how to be in this situation? The answer to this question is simple - your assistant will be a temporary mail, currently open to you. This site can help you to create your individual mail easily.

So, our service can create temporary mail which can help you to register on the different websites without any problems like a your usually e-mail address and to avoid spam.

This service has some features: you can update your e-mail when time expired and you can delete this e-mail address if you don’t need it more.

How to use our service?

- How to create my e-mail address?

At first, you should create your individual e-mail address. To do this action. Click on the button “Generate” near the empty field and after this you will see your unique e-mail address in this field.

So, you have an e-mail address.

- How to check my messages?

This mail can be used for activation accounts after registration. So to register you should paste this e-mail address to field on the website which you want to register, write your password etc. After this you can check your messages.

To do this action, you should click on the button “Update Messages” on the right side of the page. If you have messages, you will see it under the field with your e-mail address. You can see send time, subject, e-mail address from where you received this message and message text. If you have not messages, you will see the message “You have no messages”. If you are sure that you do anything clear, click the button “Update Messages” again.

### **Attention!**

*This service can show **only 20** messages that came last. Be careful with it.*

- How to extend my e-mail address?

Start mail time is one hour. It might can be extend if you don't have time to do what you want by hour.

To do this action, you should click on the button "Update" on the right side of the page. After this your mail extends to one hour. If you want to extend it again, try this instructions again.

**Attention!**

*If your time is over and you want to extend e-mail address – you will see start page without your address because your time is over. Watch the time and extend e-mail address in time!*

- How to clear my messages?

If you have too many messages which you don't need now, you can clear your messages and let service to show next messages.

To do this action, you should click on the button "Clear" on the right side of the page. After this your messages will be clear. Then you will see message "You have no messages". After this you can continue work with the service.

- How to delete my e-mail address?

If you done anything you want and have some time, you may delete your e-mail address. Then your e-mail address and messages will be deleted, session will be destroy and to work again with the service you should to create your e-mail address again. How to do it, see above.

To delete your e-mail address, you should click on the button "Delete Mail" on the right side of the page. After this your mail and messages will be deleted. You will see the start page without e-mail address and messages. To work again with the service you should to create your e-mail address again.

So, this service is very comfortable because it has plain interface and clear working principle. How to use this service, you can find in this tutorial.

Have a nice work with our service!

Yours respectfully,

team of developers
